Single-Use Bottle Assemblies, PETG Bottles with PP Caps

- Designed to ensure an unobstructed fluid path
- Stopper includes molded strain relief to prevent kinking
- Manufactured, assembled and packaged in Class 7 cleanroom
- USP Class VI approved materials
- Animal Derived Component Free (ADCF)
- Gamma irradiated to Sterility Assurance Level (SAL) 10⁻⁶

Our single-use bottle assemblies in five standard sizes from 125mL to 2L. Each consists of a PETG bottle with a 2-port closure assembly, a 30mm / 0.22µm vent filter and a 24-inch length of tubing. A 1/4" pinch clamp is included on the tubing. The v-notched, dip tube extends to the bottom of the bottle for complete draining. Each unit is double poly-bagged and gamma irradiated at 25kGY-40kGY.

- Optional vent heater
- Two-year warranty

Easy Bag Installation

Increased flexibility with modular format, optional trays and accessories.

Modular benchtop bioreactor system consists of a heavy-duty base unit and a choice of stainless steel rocker trays. Engineered for durability, it can be used in both research and development as well as production environments. The smooth rocking motion provides gentle, efficient mixing and gas transfer. Designed for optimal performance with Chemglass 8-port and 6-port cell culture bags but easily accepts other manufacturers' bags having the same dimensions. The optional bag and vent heater, made for use with both size trays, keeps vent filters free of harmful condensation that can clog filters and compromise cultures.

NOTE: Temperature controller, **CLS-1200-2CH**, must be purchased separately.

NEST High Efficiency Polycarbonate Flasks with Solid or Vent Caps , Sterile, USP Class VI

- Polycarbonate has high standard of transparency and the flask has a clear graduation scale for easy observation.
- Sterilized by E-Beam
- Non-Pyrogenic
- Packaged in sterile bags, 4 per case

Tips

- Recommended volume: 30-40% of the bottle volume.
- Rotation speed suggestion: the starting speed is 75-125RPM, you can control the rotation speed according to the application.

The imported medical-grade polycarbonate that meets with the requirements of ISO 10993 USP<661> is chosen as the raw materials, which has high transparency, great impact resistance, oxidation resistance and can withstand a high temperature of up to 121°C. The scale is clear and accurate when looked at from the outside, which facilitates the observation of the volume of culture medium. The vent cap is equipped with a 0.22µm breathable film which is air-permeable and water-proof to efficiently prevent the passing of micro-organisms and contamination and to ensure gas exchange for good growth of cells or bacteria. The products have undergone the tightness test, drop test, high-temperature and high-voltage tests, flatness test, tensile test, endotoxin test, sterilization test, DNA/RNA enzyme-free tests and cell culture test, all the results of which meet the corresponding quality standards.

NEST Multi-function, Liquid Transfer Caps

The multi-functional transfer cap can be directly placed in an incubator for culture after the liquid transfer is completed. It can reach a large air flux. The sampling part is composed of a sampling nozzle and a one-way valve, which can prevent the liquid from flowing backwards during the sampling process and ensure the aseptic sampling. The liquid inlet tubing is provided with a PTFE needle filter, which solves the issue of liquid remaining in the tubing during the feeding process.

Polycarbonate Erlenmeyer Flasks with Graduations and Duo Caps®, Sterile

Available with Baffled or Plain Bottoms

Erlenmeyer flasks are sterile, non-pyrogenic and manufactured with polycarbonate resin. Flasks are supplied with either exclusive DuoCap designed for both aerobic and anaerobic applications (for aerobic applications the cap utilizes a 0.22µm pore size PTFE membrane for sterile air exchange; for anaerobic applications the cap can easily be converted to a solid cap design) or green filter caps. Solid top caps are also ideal for applications requiring mixing, shaking and storage of biological fluids. Graduations are molded for accuracy. New EZ-Tear packaging allows for easy access.

CELLTREAT® Erlenmeyer and Fernbach culture flasks are designed for shaker and cell culture applications. All flasks feature a 70mm neck size that provides easy access for filling and dispensing. The unique shape of the Fernbach flask provides an increased surface area to volume ratio for improved gas exchange. The flasks are available in 2L Erlenmeyer, 2L and 3L Fernbach sizes, with baffled bottoms. The polypropylene caps are knurled for secure grip and are configured in 70mm large vent or non-vented styles. The flasks are constructed from an optically clear polycarbonate material that can be autoclaved. All flasks include a vented cap and are individually packed in bags and gamma irradiation sterilized. Additional caps are available separately.

Feed Bottle Transfer Assemblies with GL-45 Threaded Caps, Two Ports, AdvantaFlex® Tubing, Sterile

Chemglass Life Sciences GL-45 cap transfer assemblies are available in sizes from 125mL-1L. These transfer assemblies are extremely helpful for sterile transfer of liquids from containers or bottles which have a GL-45 threaded neck. Our assemblies are a great choice to achieve sterile fluid transfer when using Corning and Thermo Fisher filter systems and storage bottles.

Each 2-port GL-45 closure assembly includes a 0.22µm filter, 24-inch length of AdvantaFlex tubing with a plugged end, 1/4" pinch clamp and a V- notched dip tube. The assembly is made from pharmaceutical grade thermoplastic elastomer resin. Manufactured, assembled and packaged in a Class 7 cleanroom, USP Class VI approved components. Each assembly is individually double poly-bagged and gamma-irradiated.

Please note: Compatible with Fisher / Nunc brand and Corning brand filter media bottles.

Transfer Assemblies, Vented, for Single-Use Media Bottles, with Plugged Ends and TPE, Weldable Tubing, Sterile

Transfer cap assemblies, vented for Single Use Media bottles are a cost effective and convenient way to transfer liquid. The venting port ends in a 30mm diameter vent filter with a 0.20µm pore PTFE (hydrophobic) membrane and barbed fitting. All components in contact with the media are USP Class VI and the Size 16 tubing has a clamp and a plugged end. Tubing with a tubing clamp and ending with a plugged end. Individually double bagged and gamma irradiated sterile.

Transfer Assemblies with Plugged Ends and Weldable C-FLEX® Tubing, Triforest®, Sterile

Transfer cap assemblies for 1L and 2L Triforest® Erlenmeyer flasks. The venting port ends in a 50mm diameter vent filter with a 0.20µm pore PTFE (hydrophobic) membrane and barbed fitting. On the external side you will find 1/8" ID x 1/4" OD weldable C-Flex tubing with a tubing clamp and ending with a 1/8" end tube plug. The liquid transfer port has an internal end with a rigid 1/8" ID x 1/4" OD C-Flex dip tube with a notched end to reach the bottom of the flask. Individually double bagged and gamma irradiated sterile.

Sample Tube™ Assemblies, 50mL, Sterile, Single-Use, 50mL Centrifuge Tube

The 50mL polypropylene centrifuge tube assembly utilizes a closed cap assembly with 18" of size 16 (1/8" x 1/4") C-Flex tubing inlet line with a pinch clamp and plugged. The assembly includes a 3" vent line with a PTFE filter. Assembly is certified sterile.

The sample tube assembly can be used for sampling and transfer of biopharmaceutical products and reagents in closed systems. Sold individually wrapped in a bag of ten.

OmniTop Sample Tube™ Assemblies, Pre-Sterilized, Single-Use, 15mL and 50mL Centrifuge Tubes

- Transfer of biopharmaceutical products and reagents in a closed system
- Gas exchange transfer
- Sampling of biopharmaceutical products and reagents in a closed system
- Storage of biopharmaceutical products and reagents
- Use with bench top, pilot plant and production bioreactors
- Use with sterile connecting devices and thermal or RF tubing sealers

OmniTop Sample Tubes are convenient devices that can be used to obtain fluid samples. Each OmniTop tube comes with a pre-attached 0.2µm vent filter and 18" of C-Flex® tubing. They are available with or without internal dip-tubes to facilitate removal of the fluid inside.

OmniTop Samples Tubes can be aseptically connected to your bio reactor or other device using standard tubing welders. Sample Tubes can also be aseptically sealed and removed (wet or dry) using tubing sealers.

Blue caps indicate the tubes are polypropylene. **Purple caps** indicate the tubes are polystyrene.

50mL Assemblies

10mL Bioreactor Syringe Samplers with Luer Lock Connections

Sampler uses all luer style connections, eliminating any needle sampling and risk of puncture injuries. No valves - the sampling valve is opened by the attachment of the sampling syringe and automatically closes once the syringe is removed. Great for cell culture sampling of spinner flasks or bags.

Safety

All luer-style connections make for safe sampling.

Single-Use Bioreactor Accessory Kits Ready for Sterilization

CLS-1390-01

Single Use

- Minimize labor costs
- Eliminates cleaning validation
- Reduces set up time and costs

Pre-Fabricated Assemblies

- Minimize injuries associated with cutting in-house
- Improved consistency

Offers Closed System

- Gives the ability to assemble in open lab type environment
- Provides aseptic solution to close off an unused line

How to Sterilize

- Autoclave max 15 psi @ 134°C, 60 min
- Gamma radiation 25 kGy to 50 kGy

Platinum-Cured Silicone Tubing, Medical Grade SILCON® MED-X

- Platinum cured for the highest degree of purity (least extractables)
- Reusable — will withstand repeated sterilization^
- Translucent natural color for visual contact with the flow
- Free of BPA, latex and phthalates
- RoHS compliant

SILCON MED-X tubing is made under good manufacturing procedures and conforms to the biocompatibility requirements of USP Class VI. SILCON MED-X's surface properties resist sticking and encrustation and will not support bacteria growth. The tubing is soft, pliable, and contains no plasticizers which could leach out, causing flow contamination or tube hardening. Care is recommended in the selection and application of fittings and clamps as sharp barbed fittings or unlined metal clamps could tear into the wall.

Exposed to repeated steam sterilization, long-term high temperature or pressure, silicone will eventually relax and become gummy. It should then be replaced.

Platinum-Cured Silicone Tubing, Silcon® MED-X

SILCON MED-X is supplied in individual, heat-sealed polybags and should be sterilized prior to use.

SILCON MED-X is not recommended for implantable or in-body uses or for continuous steam applications.

Other sizes and 60A durometer material are also available, contact us for details.

Versilic™, Peroxide-cured, Silicone Tubing in Rolls

Peroxide-cured Versilic Silicone Tubing is designed for applications where flexibility, resiliency and durability are required. Its inner smooth surface reduces the risk of particulate entrapment and microscopic buildup during fluid transfer.

Tubing is FDA food grade compliant, entirely non-toxic, non-hemolytic and non-pyrogenic. It also meets 3-A Sanitary Standards, FDA 21 CFR Part 177.2600 Criteria and NSF 51 Standard. Withstands temperature extremes from -100°F to 500°F (350°F maximum for NSF applications).

Sold in standard lengths of 50ft.

Single-Use Bioprocess Tubing Assemblies to Your Custom Specifications - 3 Easy Steps

1 DESIGN YOUR ASSEMBLY

Technical specialists work with you to create/design the assembly and provide recommendations on tubing, fittings, quick connects and filter components.

2 QUOTATION and 2D or 3D DRAWING

Fast turnaround on your quotation and drawing of your assembly. The drawing will include details and a subcomponent bill of materials.

3 DELIVERY – SINGLE ORDERS or BLANKET ORDERS

We work with you to meet your deliver needs on single orders or blanket delivery scheduling. Chemglass stocks many fluid handling components such as tubing, fittings, quick connects and filters so they are available when needed.

Let's discuss your custom specifications.

CPC ASEPTIQUIK® S Series Connectors, Non-Sterile

- Genderless design** Eases integration of single-use systems with one part number for both halves
- Robust construction** Repeatable and reliable performance with no additional hardware required
- FLIP-CLICK-PULL** Innovative three-step connection process reduces risk of operator error
- Integrated pull tab** Connectors have an integrated pull tab that acts as a protective cover reducing part complexity and ensures simultaneous removal of both membranes
- CPC “Click”** Audible confirmation of assembly

Specifications	Material	Polycarbonate, USP Class VI, ADCF
	Material Finish	Molded White
	Pressure Range	Up to 60 psi, 4.1 bar
	Color	White with blue tab covers
	Mounting Option	Free Floating
	Supplied Non-Sterile	Autoclave and Gamma Radiation Compatible
	Temperature Range	39 - 104°F (4 - 40°C)
	Seal Options	Silicone, Platinum-cured, USP Class VI, ADCF
Valve Option	Non-Valved

Flip, Click and Pull Assembly Procedure

FLIP

Unsnap and flip down the protective pull tab covers on each connector half.

CLICK

Align connector halves with pull tabs hanging down. Slide halves together. Independently squeeze each side of connector until you hear an audible “click.”

PULL

To complete the connection, simply snap the pull tabs together by pushing on the CPC logos and pull the membranes from the connector.

CPC ASEPTIQUIK® C Series Connectors, Non-Sterile

- CLICK-PULL-TWIST Design** Intuitive three-step connection process reduces risk of operator error
- Membrane pull tabs** Ensure simultaneous and secure removal of both membranes
- Robust construction** Repeatable and reliable performance with no additional hardware required
- Integrated lock ring** Secures final connection preventing disassembly
- CPC “Click”** Audible confirmation of completed assembly steps

Click, Pull and Twist Assembly Procedure

CLICK

Align male and female couplings; push until “click” is heard. Slight rotation of lock ring may be required for proper alignment prior to connection.

PULL

Snap membrane pull tabs together and pull from connector.

TWIST

Twist the blue lock ring clockwise until “click” and rib to arrow alignment confirms secure final connection.

BarbLock® Ultra-Secure Retainer System

- Replaces inconsistent and leak-prone cable ties and traditional clamps
- Compatible with all flexible tubing materials
- Provides 360° radial crimp behind the barb
- Supplies 360° compression over the barb and full dynamic retention
- Eliminates solvent bonding, ultraviolet bonding and toxic adhesives
- Constructed with USP Class VI materials

BarbLock® Ultra-Secure Retainers are the most advanced design available in today's demanding connective applications. When it comes to retaining flexible tubing and hose onto barbed fittings, BarbLock retainers are the only system with a full 360° radial crimp behind the barb and 360° of compression directly over the barb's ridge. BarbLock retainers have become the standard in many industries, including biopharmaceutical, medical and laboratory, because they solve inherent leak path problems in sensitive and demanding applications. The retainer uses no adhesives or solvents, is ideal for systems transferring delicate liquids or gases, and is quick and easy to assemble, saving valuable time.

Retainer Assembly

Standard Two-Piece

AL Series One-Piece

BarbLock Retainers available on Custom Tubing Assemblies

Quick and easy to assemble with a full 360° radial crimp behind the barb and 360° of compression directly over the barb's ridge.

Typical Applications

- Biopharmaceutical transport systems
- Flexible tubing and hose retainers
- Disposable assemblies
- Medical equipment and apparatus
- Quick connects

Contact Us for More Information on Custom Assemblies Using BarbLock Retainers

Full 360° compression directly over barb ridge

Full 360° radial crimp

- BarbLock sleeve
- BarbLock collet
- Barbed fitting
- Tubing

BarbLock

↔ vs. ↔

Cable Tie

No 360° radial crimp or seal

Potential for tube distortion

No direct compression over barb
